Is Data the Future, the Solution or the Problem?

Join us for a discussion around Data - what it is, what it means and how we can use it to change the way we do business, communicate and live our lives.

Imagine, Charles Sturt University's innovation lab, is holding a public discussion around data, its uses and implications. We have assembled a panel of local experts keen to share what data means to them, how it's being used in their industry and what the future might hold.

From Agriculture to Logistics, Health to Communications, data is fundamentally changing how we do things - from making decisions, caring for one another, working with the environment and doing business around the world.

Data is having a huge impact on the way we live our lives and how societies work, from personal privacy, to big business, to government and elections.

Our panel Includes:

- Deb Blackwell - Agriculture
- David Bardos - Logistics
- James Howell - Information Technology
- Dr Tim Caton - Health

This is free and interactive event, so come and discuss the big issues around data with us!

More information is available from www.uimagine.edu.au

DATE 11th April, 2018
